

Designing the ECLIPS Study

Frank DiTraglia, Ludovica Gazze (and friends!)

What is the ECLIPS Study?

Elevated Childhood Lead Interagency Prevalence Study

- ▶ Jane Entwistle, Lindsay Bramwell, *Northumbria*
- ▶ Frank DiTraglia, *Oxford*
- ▶ Ludovica Gazze, *Warwick*
- ▶ Carys Lippiatt, *Leeds Teaching Hospitals*
- ▶ Priya Mondal, Ovnair Sepai, *UKHSA*
- ▶ Jackie Morton, *Health & Safety Executive*
- ▶ Caroline Taylor, *Bristol*

UKRI Cross Research Council Responsive Mode Scheme

- ▶ Funded from Jan 2025 – Dec 2027
- ▶ Pilot a home test for childhood lead exposure in Leeds
- ▶ Finger-prick test using Capitainer (at right)

Background on Childhood Lead Exposure

Lead is a potent neurotoxin

- ▶ Toxic whether inhaled or ingested
- ▶ Most harmful to young children
- ▶ Harm from even low levels of exposure

Didn't we get rid of the lead?

- ▶ Lead paint and pipes in older homes
- ▶ Soil near major roads still contaminated
- ▶ Industrial pollution, traditional products

US Policy Landscape

- ▶ EPA regulations for renovation (lead paint)
- ▶ Mandated screening of children on Medicaid
- ▶ Screening for representative sample: NHANES

United States government organization

Even low levels of lead can cause behavior and learning problems in children – impairing their growth. The Bipartisan Infrastructure Framework will replace our nation's dangerous lead pipes and service lines.

LEAD SERVICE PIPES IN THE U.S.
There are up to **10 million** lead services lines that need to be **replaced** across the country.

Legend:

- 10K - 50K lead service pipes
- 50K - 100K lead service pipes
- 100K - 200K lead service pipes
- 200K - 500K lead service pipes
- more than 500K lead service pipes

Economists are allowed to write papers about lead exposure.

Aizer & Currie (2018; AEJ Applied)

Lower BLLs explain 75% of decline in school suspensions from 1994-2015 in RI

Aizer, Currie, Simon & Vivier (2019; ReStat)

Low levels of lead ($BLL \leq 5$) have a discernible negative affect on test scores.

Groenqvist, Nilsson & Robling (2020; JPE)

Long-term effects on human capital and crime from low doses of lead

Billings & Schnepel (2018; AEJ Applied)

Early interventions largely reverse negative effects for lead-exposed children.

Abbasi, DiTraglia, Gazze & Pals (2023; J. Health Econ.)

Estimate geographic distribution of undetected lead poisoning in Illinois; evaluate alternative screening policies.

Half of US adults were exposed to harmful lead levels as kids, study finds

Researcher calls findings 'infuriating' as team finds significant impact on cognitive development

Associated Press

Tue 8 Mar 2022 00:20 GMT

Over 170 million Americans who were adults in 2015 were exposed to harmful levels of lead as children, a new study estimates.

Researchers used blood-lead level, census and leaded gasoline consumption data to examine how widespread **early childhood lead exposure** was in the country between 1940 and 2015.

England MSOAs and US Zip-codes: Proportion of Houses Built Prior to 1954

There is no lead screening in the UK whatsoever.

2018 National Screening Committee Report

The volume, quality, and direction of evidence published since 2012 does not indicate that screening for elevated BLLs should be recommended in the UK. Several uncertainties remain across key criteria including: lack of evidence that elevated BLLs in children is an important health problem in terms of UK prevalence.

2019 Lead Exposure in Children Surveillance System Report

There are no recent comprehensive survey data estimating how many children in England are exposed to lead.

2021 Public Health England (now HSA)

Public health intervention level for lead halved from 10 to 5 μ g/dl.
